"Then, Now, and Serving you into the Future"

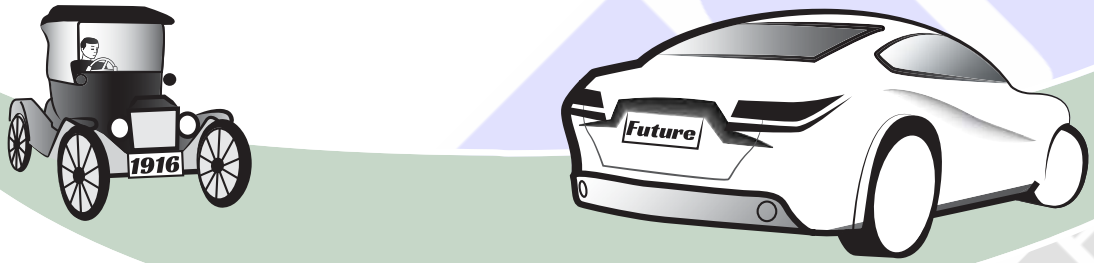

For over a 100 years, Auto-Vehicle Parts LLC (Auveco) has been manufacturing and distributing specialty automotive and industrial fasteners.

Originally, Auveco manufactured trim parts and accessories for horse drawn carriages. After four generations, Auveco is still family owned.

We are the **World's Leader** in servicing customers' needs for Automotive Body Hardware and Specialty Fasteners through our worldwide distributors.

We market our products through traditional channels of distribution, selling only to authorized Distributors and O.E. Manufacturers. FasTrack Web

A Body Shop Cost Recovery System

FasTrack is an easy-to-use, web base application designed to assist body shops and dealerships in recovering the cost of the body repair clips and fasteners used in daily collision repairs.

The cost of fasteners used in collision damage repair is often an expense that is not recovered by shops. Insurance companies consider these items “a cost of doing business” and are either reluctant or refuse to pay claims for these items unless they are presented with an itemized invoice detailing the cost of these items.

FasTrack Web makes it fast and easy to manage these parts and turn them into a source of additional income for your shop.

Features:

- Integration with CCC® Estimating
  - CCC ONE is the largest estimating service in the U.S.
  - Enables end users to send invoices seamlessly and easily to CCC’s estimating system
- The ONLY supplemental invoicing system on the market using the OEM pricing structure that is widely accepted and requested by insurance companies across the country
- Extensive data base of over 10,000 collision repair fasteners by Auveco
- Distributors can add multiple items. As well as, their own unique part numbering system.
- Shop Items give the body shop the ability to also add their own items
- Kit Management allows the distributor or the shop to build their own specific repair kits, as well as, pre-designed kits
- Labeling functions allow for printing individual bar code labels and new drawer lid labels
- Barcode scanning can be done with our app using any smart phone or with our wedge scanner
- Reporting and Inventory Management allows the distributor to gather information on product usage at the shop level for all supported shops
- Body Shops can now sign up directly by filling out order form and adding an authorized Auveco distributor name
- No annual updates, as all data resides on our Internet server and is always up to date
- Can be accessed from any computer with Internet access
- Site protected by Verisign Internet Security.

Auveco’s FasTrack Web is only offered through authorized Auto-Vehicle Parts LLC distributors.

Helpful Tips

- All parts are displayed as actual size, unless labeled "not actual size" or is a picture accompanying a chart. As actual size you will be able to set a part on top of the picture to positively identify it.

- We have included Specification Charts to assist you in the identification of various types of fasteners.

Charts can be found on the following pages:
- Body Bolts- Pages: 88 & 121-122
- Special Tapping Screws- Pages: 91-94 & 128-130
- License Plate Screws- Pages: 105-106
- Retainers- Pages: 475-489
- Push-Type Retainers- Pages: 534-545

Charts list the pertinent dimensions, plating and color information, as well as, the page number on which the actual size picture and application information is shown for each item.

- At the back of the catalog are two O.E.M. part number to Auveco part number Cross References.

One of these interchanges is broken down by O.E. manufacturer i.e., General Motors, Ford, etc.

The other interchange combines all O.E.M. numbers together and is sequenced strictly in alphanumeric order regardless of the manufacturer.

FASTENER TERMINOLOGY

Bolt: Externally threaded, headed fastener. Difference between a bolt and a screw: a bolt is generally used through a hole with a mating nut. A screw is used in a threaded hole without a nut.

Class of Thread: A system to distinguish thread tolerance differences. Classes 1A, 2A, and 3A apply to external threads. 1B, 2B, and 3B apply to internal threads. Classes 2 and 3 apply to both external and internal threads.

Crest: Outermost tip of male thread from the fastener cylinder, or innermost tip of female thread.

Driving Recess: Recess in the fastener head designed to accept a driving tool.

External Thread: Male thread. Thread outside of the cylinder surface.

Internal Thread: Female thread. Thread on the inside surface of a cylinder or cone.

Left-Hand Thread: Thread that winds counter-clockwise from the starting end of a fastener.

Right-Hand Thread: Thread that winds clockwise from the starting end of a fastener (viewed from starting end).

Major Diameter: Largest diameter of a screw thread on a straight thread. It is the diameter of an imaginary cylinder which would pass through the crest of an external thread or the root of an internal thread.

Minor Diameter: On a straight thread it is the diameter of an imaginary cylinder bounding the root of an external thread or the crest of an internal thread.

Nominal Diameter: Basic diameter that determines the size and dimensional limits of fasteners.

Pitch: Distance from a point of a screw thread to a corresponding point on the next thread measured parallel to the axis.

Screw: Headed fastener which is externally threaded.

Sems®: Pre-assembled screw and washer assemblies. Washers are placed on screws before roll threading. Threads of larger diameter than the washer hole thus prevent the washer from slipping off the screw.

Stud: Threaded rod at both ends or for entire length.

Tapping Screw: Hardened thread screw made to cut or form its own mating thread in an untapped hole.

Teks®: Screw which drills its own hole and then threads in.

Thread Pitch: Distance from the crest of one thread to the crest of another.

GRADE 8 HEX FLANGE PRODUCT FOR FRAME BOLTING

All Items Phosphate & Oil

Auveco flange bolts and locknuts form a strong and dependable fastening system that substantially cuts truck assembly, maintenance and repair costs. The flange bolts are made to IFI 111 industry standard specifications. When flange bolts are used in conjunction with the flange locknuts they form a 150,000 P.S.I. tensile strength fastening system equivalent to SAE J429, Grade 8 industry standard specification. Flat washers and lock washers are not needed with the flange bolts. Our flange fastening system also reduces the need for costly hole preparations such as deburring and countersinking.

J.I.S Small Head Cap Screws

J.I.S. B 1180 • I.S.O. Class 8.8
Heat Treated • Steel • Zinc Plated

J.I.S. fasteners have a smaller hex dimension (across the flats) than DIN or ISO metric fasteners. They fit in those tight spots where the hex of an ISO or DIN fastener is too large. J.I.S. fasteners are OEM equipment on many GM and Japanese import car applications.

U.S.S., S.A.E. & Metric Bolt and Nut Gauge. Excellent for sizing bolts, screws, nuts (USS, SAE, and Metric) and twist drills. Determine the bolt diameter by pushing the bolt through the sizing holes, as well as, gauges hex nuts and washers (USS & SAE) size. Metric hex nuts and washers can be measured by holding them under the metric holes.

The back of the gauge includes a feature for measuring U.S. and Metric thread pitch. Special notches on the front of the tool allow you to measure flat head metal and wood screws.

Made of sturdy, light weight green plastic that resists water, alcohol, oil and grease.

AUVECO THIN SHEET NUTSERT® INSERTS

U.S.S., S.A.E. & Metric - Steel and Aluminum

Threaded Inserts for Thin Material
The Auveco Thin Sheet Nutsert has been designed to provide a highly efficient method of securing threads from one side of the work, in materials generally too thin to support threads. Its performance has been proven in plastic, aluminum, mild steel and fiberglass. They can also withstand high loads without vibrating or loosening under extreme operating conditions. The Auveco Thin Sheet Nutsert is a tension fastener with high pull out, insuring no rotation or vibration where a cover plate is used. The system's unique blind tooling installs TSNs at consistent rates using unskilled labor.

How it Works
The Thin Sheet Nutsert, held securely by the tool, is placed into a prepared hole. Upon the tool's actuation, the threaded portion is pulled until the fastener's wall collapses radially outward, clinching it tight against the sheet. The tool is withdrawn, leaving the Thin Sheet Nutsert ready to receive a bolt or screw. This complete operation takes only a few seconds and can be performed by anyone.

1. Insert TSN into prepared hole

2. Engage the tool

3. TSN installed with standard head configuration

Strength Tests: Torque Strength: with an attaching part over the Thin Sheet Nutsert, offering a bearing surface, the TSN will remain intact past the point of the screw or bolt breaking (head torqued off). In almost all cases the threads of the TSN will remain undistorted and serviceable; an exception to this statement is when an extremely high tensile bolt is used.

Steel: 1010 Low Carbon Steel, Type 11 Class 3 with Zinc Plate, Clear Chromate
Aluminum: Aluminum Alloy 5056, Plain Finish, Metric Class 6H, U.S. Class 2B

To set Nutserts, Use tool 11805 & Conversion Kits listed on Page 163.

Sec. 9 LARGE FLANGE THIN SHEET NUTSERT® INSERTS

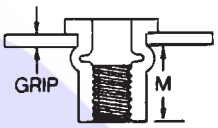

U.S.S., S.A.E. & Metric - Steel & Aluminum

The Large Flange system provides captive threads in materials too thin to independently support threads, or where costly tapping operations are to be eliminated. The Large Flange fastener can be used as a rivet to join materials that will ultimately have a separate component attached.

Materials: Low Carbon Steel, Zinc Plated
(Metric: Zinc & Yellow Plated)
Aluminum Alloy, Plain Finish

To Set 8-32, 10-24 and 10-32 Large Flange Nutserts, use tool 11805 and conversion kits listed on page 163.
Large Flange Nutserts, 1/4”-20, 5/16”-18 and 3/8”-16, require a pneumatic tool for installation. They cannot be set with 11805.

NUTSERT® INSERTS

U.S.S. & S.A.E. Thread

The Auveco Nutsert was developed to offer both the production-oriented designer and the engineer a unique and versatile anchor nut-type insert for high-speed installation. This Auveco system gives the designer the option to design for **blind** or **open** applications, eliminating and simplifying their design problems.

Our system provides a cost-saving method of installing clean, load-bearing steel threads in castings, fiberglass, fiberboard, plastics, wood or almost any ductile material more than .030" thick.

A simple hand tool installs the Nutsert, it is ready for use in seconds and no finishing is required after installation.

Auveco Nutsert's advanced design offers unlimited grip range in a minimum of sizes. Inventory is minimized to one body dimension per thread size; ideally suited for blind, buried and through holes. The ingenious "taper-lock" principle locks-in the Nutsert preventing spin or twist; installs in flat or curved surfaces and is self-tightening with repeated use. The unique design of the installation tool eliminates marring of the parent material surface

HELICAL THREAD REPAIR INSERTS & KITS

For repairing stripped or damaged threads

The most effective and universally accepted method of thread repair. Inserts quickly and permanently restores stripped, worn or damaged threads to their original size and condition.

When threads become stripped, worn or damaged for any reason, the strength and reliability are greatly reduced. When this happens on critical threaded assemblies, cars, and other types of equipment, it may become unsafe to operate.

These potentially dangerous situations are eliminated when the damaged thread is repaired with a thread repair insert. The threaded insert provides stronger, more reliable threads than the original tapped hole and at the same time eliminates the possibility of thread wear, seizing and corrosion.

Easy to use… 1: Drill 2: Tap 3: Install
Now you're back to the original size and the original size fastener can be used.

Vibration Proof Lock Washers
Zinc Flake Coated

For use with Grade 5, Grade 8 & ASTM 574 High Grade Bolts

These washers have cams or wedges on one side, a lead angle greater than a thread angle, and radial teeth or ribs on the other side. The washers are installed cam face to cam face. When tightening the fastener to preload, the teeth penetrate and seat against the joint material and the nut and/or fastener head. When subjected to vibration the interacting cams create a wedge action which prevents the fastener from vibrating loose.

Material: Carbon Steel
Hardness: Through Hardened: 465HVI

Spooled Fusible Link Wire

The lower the gauge number, the thicker the wire (i.e. 10 Ga. is thicker than 16 Ga.)

A fusible link is a special section of low tension cable installed by an OEM and designed to open a circuit when subjected to extreme current overload. Its purpose is to minimize wiring system damage when such an overload accidentally occurs in those circuits protected by the fusible link. A short circuit causes the fusible link to act as an element in a “slow-blow” fuse. A fusible link is not intended to be used in place of a fuse but only where a fuse cannot be economically employed. Our fusible line wire meets the requirements of SE J-156 and the insulation has the characteristics as listed for EAE, SE J-1128 Type SXL. The vehicle manufacturer should be consulted about questions on fusible link length and size. General practice has been for a fusible link to be 4 gauges smaller than the circuit wire.

Example: if the circuit wire is 12 gauge, use a 16 gauge fusible link.
Final determination should be based on O.E.M. application.

Note: Extreme care should be taken to always replace a fusible link with then same gauge and length as installed by the manufacturer.

Replace heat shrink tubing with a safe, tight, long-lasting seal that withstands temperature extremes from -50° to 300°F. No heat guns or open flames needed. No paper liner to mess with.

Tape is stretched when applied and retains its elasticity to ensure a tight seal at all points. The tape is unaffected by salt spray and common automotive fluids. As long as it is stretched when it is applied, it will not unravel after application due to its self-bonding characteristics.

Routing Clips

A quick, economical method of fastening wires, tubes, hoses or rods from 1/4" to 1" diameter to metal, plastic or any other surface ranging from 1/32" to 1/8" thickness. Clips are molded of durable black nylon plastic. They snap into 1/4" diameter holes and are held firmly in place by flexible "snubber tips" which compensate for variation in wall thickness.

POP® MULTI-GRIP BLIND RIVETS

Functions in a Wide Range of Material Thickness

The Multi-Grip rivet will serve in applications where solid, soft materials and thicknesses normally require several rivet sizes. Oversize, irregular or misaligned holes are automatically compensated for by self-adjusting hole-filling capability. The mandrel head is retained in the rivet body, forming a tight, weather resistant seal.

AVEX® BLIND RIVETS

What makes Avex different and better?

The Avex rivet adds important and exclusive features to those offered by ordinary blind rivets. The unique advantages designed into the Avex rivet allow for its use:

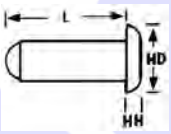

In wide-tolerance holes. Since the rivet can expand up to its own head diameter, accurate hole sizing or alignment is not necessary.

To pull sheets together. The extraordinary rivet tail expansion automatically effects superior clamp-up action on the parts being assembled.

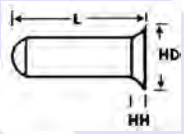

Over a vast range of thicknesses. The "dubble-bubble" expansion feature offers the capability to fasten securely in both thick and thin grip ranges with a single length rivet.

While providing a sealed stem. The rivet material flows both behind and in front of the mandrel insuring a positively retained and sealed stem.

The System

Blind Installation: The single side installation feature of the Auveco Monobolt System allows one operator to produce high quality structural joints in seconds. Use of the Monobolt power tool does not require special skill or training, because the tool completely controls the installation cycle.

Multi-Grip: One size Monobolt fastener will function effectively in a wide range of material thicknesses (Example: .080" to .375"). This versatility decreases the potential for production errors and reduces fastener inventory requirements.

Uniform Clamping Action: Monobolt fasteners are engineered to draw materials together by developing positive clamping action.

Its Advantages

Structural Fastening: An installed Monobolt fastener yields high shear and tensile values. Conventional fasteners can be replaced by Monobolt without compromising structural requirements.

Positive Stem Retention: At the completion of the installation cycle, the stem is mechanically locked into the Monobolt shell, creating a vibration-proof joint of assured structural quality.

Flush Break Stem: Within the specific grip range for each size, Monobolt fastener, the stem is designed to break flush with the low profile head. Secondary finishing operations, such as grinding or milling, are not necessary to achieve good product appearance.

Complete Hole Fill: During installation, the Monobolt shell expands into 360° contact with the walls of the parent material. This feature, in conjunction with positive stem retention, produces weather resistant joints.

Quiet, Safe Installation: The Monobolt System, operating at 85db ("A" Weighted), complies with OSHA regulation governing plant noise levels and operator safety

How it Works

1. The Monobolt fastener is loaded into the nose of the placing tool and inserted in a prepared hole. As the tool is actuated, the pulling jaws grip the Monobolt stem.

2. An axial pull draws the stem through the shell, expanding it radially. During this phase, the hole is completely filled and work pieces are drawn together.

3. When the stem reaches a pre-determined position within the Monobolt shell, it separates flush with the head profile regardless of work piece thickness. Simultaneously, the stem section remaining in the shell is mechanically locked in place by the Monobolt tool.

AuvecoPak AP448 Retail Merchandiser

AuvecoPak part numbers are the same as standard Auveco part numbers with an "AP" prefix. Thus AP11146 is the AuvecoPak version of 11146.

AP448S (Starter Merchandiser): One package each of 448 part numbers

AP448L (Large Merchandiser): Two packages each of the 224 most popular items and one package each of the other 224 part numbers for a total of 672 packages.

The AuvecoPak merchandisers (AP448S and AP448L) provide 448 of the fastest moving, most popular automotive body hardware and specialty fasteners.

Each of the 7 panels contains 32 part numbers per side.

The AP448S (Starter Merchandiser) consists of one package each of the 448 part numbers. The AP448L (Large Assortment) includes two packages each of the 224 most popular items and one package each of the other 224 part numbers for a total of 672 packages.

Two header signs identify the AP448 as an Auveco merchandiser, along with the phrase automotive body hardware and specialty fasteners. Eye-catching color scheme and graphics make the merchandiser visually appealing and portray the contents of the merchandiser.

Initial set-up is easy. The panels come "pre-dressed" with the AuvecoPaks already in place. Simply position the top and bottom brackets on a gondola or pegboard wall. Insert the panels into the brackets.

An individual panel measures 6-1/2" (wide) x 17-1/2" (front to back) x 44-1/2" (high). Merchandisers (AP448S and AP448L) fit on a gondola with 48" x 48" of pegboard or on any pegboard wall.

A gondola is not included with the AP448S or the AP448L.
Auveco customer service reps can recommend a source for gondolas.

AuvecoPak packages feature, contemporary graphics with all the necessary application and descriptive information in trilingual verbiage (English, Spanish and French-Canadian).

Re-ordering is a breeze, the AuvecoPak part number and UPC-A bar code are on the panel back-up boards beneath each hook. Restocking the merchandiser is also quick and easy with the AuvecoPak packages' locator codes identifying their specific location on the panels.

Refer to contents listing for each panel on following pages

Pop on Screw Covers & Bases

Covers: Matte Finish

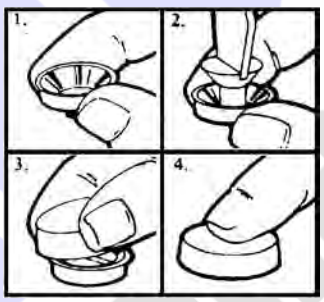

Ultra Violet Stabilized Polypropylene covers and bases help shield screws from corrosive environments. Their smooth finish forms a protective barrier against rough-edges.
For use with flat head and oval head tap ping screws and round head machine screws.

They're simple to use:

1. Place washer over pilot or starting hole for screw, nail or rivet.
2. Install fastener
3. Place Snap Cap over washer at slight angle.
4. Simply push Snap Cap down firmly.

BODY HARDWARE MASTER PROGRAM

The Body Hardware Master Program, 6600BHM is based on Auveco's Display Boards, DB-428. We have developed 20 large metal drawer assortments, which come in heavy gauge steel, pre-labeled and pre-loaded large drawers and cabinets.

Learn more about the Body Hardware Master Program in the green section of the catalog, online at www.auveco.com or contact customer service at 1-800-354-9816 or mail@auveco.com.

"428" DISPLAY BOARDS

428 of the most popular body hardware and fastener items are shrink-wrapped onto seven different boards. Each board contains product groups, body shops are familiar with and use often.

The back of each board contains each part number, unit package quantity, OEM number and size specification. The backs are protected by a clear plastic liner.

Learn more about the display boards at the front of the catalog, online at www.auveco.com or contact customer service at 1-800-354-9816 or mail@auveco.com

2004 - 1999 full size GM Pick-Up Trucks are equipped with galvanized, braided steel tailgate cables that may corrode, weaken and eventually break. Auveco's support straps are the ideal replacement. Our straps are stronger and more durable than cable. It mounts the same as the original cable, uses the same hardware and can be installed in 15 minutes. And can be used for both sides of the tailgate.

Door Hinge Pin & Bushing Repair Kits

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time?

With our Door Hinge Pin & Bushing Repair Kits, fixing sagging doors caused by worn hinges due to pin failure is quick. It's easy. It works. And you don't have to repaint the welded heat flash area.

Each kit is designed to repair one hinge and contains all the pins, bushings and related hardware to do the job.

Refer to Kit listings below and on following pages.

Photos not actual size.

Here's how it works:

1. Remove the door from the truck body
2. Remove the original equipment pin and bushings
3. Install the bushings into the hinge holes
4. Install the longer pin into the top hinge hole
5. Thread on the lock nut
6. Install the shorter pin into the bottom hinge hole
7. Place the washer and a nut on the shorter pin
8. Tighten the nut to pull the pin into place.
9. Slowly tighten both upper and lower lock nuts
10. Reattach the door to the truck body

Detailed instructions are included with the kit.

Dodge Truck Door Hinge Pin & Bushing Repair Kits

For 2003 - 1994 Dodge Ram 1500, 2500 & 3500 Pick-Up Trucks

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time? With our Door Hinge Bolt & Bushing Repair Kit, fixing sagging doors caused by worn hinges due to pin or bushing failure is quick, easy, and works. And you don't have to paint the welded heat flash area.

Each kit is designed to repair one hinge and contains one zinc and yellow dichromate plated grade 8 bolt, two self-lubricating brass alloy bushings, one zinc plated spin lock nut and one zinc plated internal lock washer.

Here's how easy it is:
1. Remove the door from the truck body.
2. Grind or cut off the end of the pin at the peaned end.
3. Remove the old pin and bushings.
4. Install the bushings into the hinge holes.
5. Place the washer on the bolt and install the bolt into the bushings.
6. Thread the nut onto the bolt and tighten.
7. Reattach the door to the truck body.

Detailed instructions are included with the kit.

"428" DISPLAY BOARDS

428 of the most popular body hardware and fastener items are shrink-wrapped onto seven different boards. Each board contains product groups, body shops are familiar with and use often.

The back of each board contains each part number, unit package quantity, OEM number and size specification. The backs are protected by a clear plastic liner.

Learn more about the display boards at the front of the catalog, online at www.auveco.com or contact customer service at 1-800-354-9816 or mail@auveco.com

ENGINE MANIFOLD REPAIR KIT

Photos not actual size

Stop excessive coolant consumption or leakage!

20574
Engine Manifold
Repair Kit

UNIT PACKAGE: 1 Kit

2003 - 1995 GM vehicles with 3.8 L series 2 engines (VIN K - RPO L36) have been experiencing excessive coolant consumption or coolant leakage near or under the throttle body and intake manifold. This is caused when the EGR tube on the lower manifold degrades the composite material of the upper intake plenum around the passage area between the two part manifold. Once the composite material is degraded, it becomes porous and allows the coolant areas on either side of the EGR passage to leak coolant either internally or externally. If it leaks internally into the intake manifold and then the cylinders, it can result in "hydro-lock" of the engine. A simple coolant leak has resulted in a major problem that as best requires changing the spark plugs and oil in order to start the engine. That doesn't correct the cause of the problem though.

Until now, the solution has been to replace the upper plenum and lower manifold at a retail cost of $1200 - $1400 for parts and labor. That alone does not correct the root cause of the problem. Our 20574 repair kit offers an inexpensive but highly effective and permanent solution.

Here are the steps involved:

1. Remove the upper intake manifold.

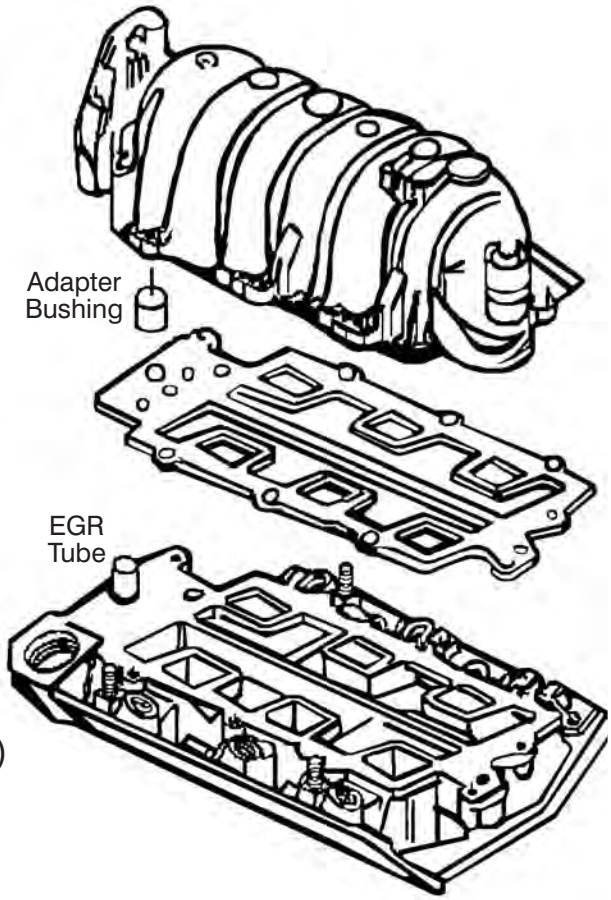

2. Remove the EGR tube from the bottom plenum.

3. Install our new EGR port tube.

4. Use epoxy supplied with our repair kit to install our new adapter bushing in the upper plenum.

5. Reinstall the upper intake manifold.

(Detailed instructions are included with the kit)

As an added benefit, the smaller diameter of our EGR port tube creates an air space between the repaired (with adapter bushing) upper plenum and the new EGR port tube. This air space insulates the composite material of the plenum from further damage.

1 Case (24 - 4oz. Tubes)

Hints for Use

- FixitQuik adheres to most surfaces. Best results will be achieved if area is first roughened by sanding or filing to clean and prepare surface.
- Starts to harden 2 minutes after mixing. Repair should be in place before hardening starts.

- Can be drilled, filed, tapped sanded and machined after one hour of curing (hardening).
- Can be painted immediately, even before full hardening.
- Usable under water. Mix as usual and use the polyethylene wrapper, so material will not stick to hands as the FixitQuik is being forced onto the wet surface.
- Not recommended for use on polyethylene and polypropylene.
- Wash hands thoroughly with soap and water after using.

Fast & Easy to Use

The Drill-Out® Broken Bolt Extractor is excellent for removing broken bolts and studs without damaging the threads in the hole. The drill body is manufactured using the finest quality hi-speed steel. The collet is produced from hot die steel, using the finest steel of its type. All Extractors are made with a precision ground 118° left hand cutting self-centering point, and are heat treated for toughness.

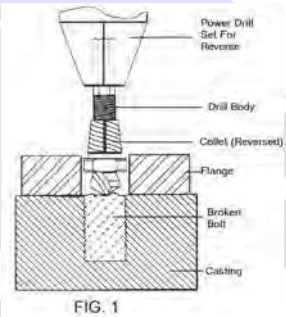

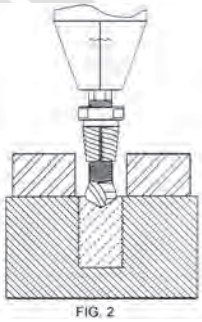

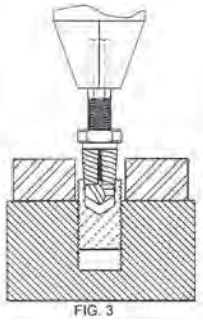

FIG. 1

FIG. 2

FIG. 3

1: Place the Drill-Out® tool into an electric drill and set for reverse operation. Move the collet up to the chuck. Note: when the bolt is broken below a flange attached to a casting, reverse the collet as in (Fig. 1.)

2: Making sure the drill is set in reverse, place the tip of the Drill-Out on the center of the broken bolt and begin drilling. Do not allow the collet to move down towards the tip while drilling. If so, thread the collet back towards the chuck. Drill just deep enough to start a hole (approximately 1/16").

3: Make sure the hole is started on center of the bolt. If you reversed the collet in step 1, change it back at this time. Continue drilling. Stop just before you reach the front of the collet. Do not let the collet touch the end of the bolt. (Fig.2)

4: Remove the Drill-Out tool from the broken bolt. Move the collet down towards the tip so that 2 threads are showing. Bring drill up to speed and plunge it into the hole. The collet automatically engages and extracts the broken bolt. (Fig.3)

O.E.M. INTERCHANGE BY MANUFACTURER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finish, length or washer outer diameter: however, the Auveco part is designed to service the same application.

This interchange is arranged numerically within each manufacturer. OEM numbers are in ascending order regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.

O.E.M. INTERCHANGE BY NUMERICAL ORDER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finish, length or washer outer diameter: however, the Auveco part is designed to service the same application.

This interchange is arranged numerically in ascending order regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.
